

450MHz Jumper Settings

This Technote relates to the ALR 7200 and 8200 systems equipped with 450MHz Pentium II processor. Refer to the table below for the proper jumper settings:

Warning! Do not run your CPU at a speed higher than it is rated or you will cause irreparable damage to your system!

| Pentium II | Auto-Detect Bus Speed | CPU Speed Settings JP22 |
|------------|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 266 MHz | 66 | 2     8 1     7 |
| 300 MHz | 66 | 2    8 1     7 |
| 333 MHz | 66 | 2     8 1     7 |
| 350 MHz | 100 | 2     8 1     7 |
| 400 MHz | 100 | 2     8 1     7 |
| 450 MHz | 100 | 2     8 1     7 |
